SUPPLEMENT

~~CONFIDENTIAL~~

1. Preparations are being made in the Gema-Werke to deport another twenty-one engineers and technicians, as well as two specialized technical designers. The date of their departure has been set for 10 November 1946.
25X1X6
2. [REDACTED] it is planned to transfer to Russia all orders and materials connected with orders placed by the Soviet Army. This means that in future Gema would work on small reparation orders only.
3. The two technical designers who are scheduled to be sent to Russia have allegedly been working for the past six months on an invention which permits to calculate the course of rockets and the location of their landing spots. The invention is based on acoustic sound location methods. So far great difficulties were encountered during the tests because of the high speed of the rockets. Tests made in Peenemunde up to a velocity of 450 km per hour have apparently been successful.
4. The departments for "Fernseh- und Fernmeldetechnik" (television and communications) are also in the process of being transferred.
5. The departments for technical designing and drafting are at present engaged in the collecting and packing of all drawings and sketches which are to be sent to Russia.
